# International cooperation and technological leadership

#### **Evgeny Burnaev**

Dr. Sci., Professor, Head of Applied Al center, Skoltech Head of research group, AIRI

E-mail: e.burnaev@skoltech.ru WeChat: Evgeny\_Burnaev Skoltech Applied Al

#### **10 Years of Al History:**

# Attention IsAll You NeedChatGPT

2017

2022

# The Race Has Just Begun

### Some Russian IT/AI companies now:

- Combined a team of top ML developers, analysts, product managers etc.
- Allocating maximum of computing power to LLMs' pretrain
- Started a series of internal hackathons
- Introduced a new profession: Al-coach and is actively hiring
- Integrating new LLMs into their products and services
- Paying maximum attention to Al ethics

# Al in Russia

#### **Areas with local leaders**

# Messengers Taxi Fintech

etc.

## Web search Social networks

# Marketplaces Voice assistants

#### Local voice assistants

### Self-Driving Vehicles

#### Some Al Indicators

### 1 ML frameworks: present, but not so popular

### Opensource: CatBoost, ClickHouse, DeepPavlov...

### 3 LLM: YaLM 2.0 (Yandex), GigaChat (Sber)

### Al Research Centers: Skoltech Applied Al center

Forecasting probability of forest fires

**Forecasting the** ice situation in the Arctic

**Monitoring and** Remote Sensing

Monitoring and forecasting of air pollution

eworks Fram

**Data Fusion** Fusion of multimodal spatial-temporal data

# Top college and university students

# Kids with strong math base

#### Brain drain

#### Some persons who were born in Russia:

# 1) Ilya Sutskever

# 2 Alexei (Alyosha) Efros

# **3** Ruslan Salakhutdinov

#### Suzhou Al expo

**Beijing AI academy** 

#### Huawei campus

#### AI Educational forum in Tsinghua University

The 10th Russian-Chinese **Engineering Technology Forum** and the Russian-Chinese Digital **Economy Summit 2023 in Harbin** 

#### Chinese strategy on ChatGPT

- Quantity -> Quality
- Based on large general-purpose models (L0), create a series of large industrial models (L1), integrate them into industrial systems
- Companies with state participation should collect and prepare relevant data on their topics (China Mobile, China Telecom, State Grid, China Southern Power Grid, PetroChina, Sinopec, etc.)
- Create 8 industrial models by 2025 (communications, electric power, logistics, petrochemicals, mining, construction, etc.) and work out 20 scenarios for the application of industrial models
- To become one of the world leaders by 2030
- Current condition there are about 30 models, but the quality remains questionable

# China and Russia: cooperation without competition
